5 → (not required) Any interesting usecases you're building we should highlight?

Potential interesting use cases that could be highlighted are:

The multi-agent customer support automation system - this could be a powerful tool for streamlining and optimizing customer service workflows. Showcasing how the agents can handle queries, route tickets, and provide personalized responses would be very compelling.

The multi-agent collaboration for financial analysis - demonstrating how the agents work together to gather data, perform analysis, and generate insights could highlight the advantages of a multi-agent approach versus a siloed, manual process.

The tools for the customer outreach campaign - sharing details on how the agent-based system can personalize communications, optimize channel selection, and track engagement metrics could be very useful for marketing teams.
